Repair team brief: videos and photos

MacBook Repair Dubai · 21 October 2026

Why we're doing this: Google shows videos and photos above the normal results. For "MacBook screen replacement" there is a row of YouTube videos, and none of them are ours. For "MacBook repair Dubai" there is a row of photos, and none of them are ours either. Real videos and photos from our own bench are the one thing competitors can't copy.

Part 1: The rules (read before filming)

1. **Real only.** Film and photograph our own bench, our own hands, our own workshop. No stock footage, no AI images, no filters.
2. **Protect the customer.**
   - Never show customer names, phone numbers, emails, job cards or WhatsApp chats.
   - Never show the screen of a customer's device with their files or photos open.
   - Never show customer faces unless the customer agreed in writing.
3. **Say only what is true.** On camera, do **not** say:
   - "Apple authorised" or "Apple certified" (we are independent)
   - "guaranteed"
   - "best in Dubai"
   - "No. 1"
   - any price in AED (prices are being decided separately)
   - any time promise we don't always keep ("30 minutes", "same day")

Say what we actually do and what you actually see.

4. **Do not show:**
   - The address, phone number or opening hours on camera. We add those in the description so they're always correct.
   - Any other company's logo or brand, except the Apple device itself.

Part 2: The videos

How to film (every video)

- **Shape:** horizontal (landscape) 16:9, 4K or 1080p, 30 fps. Google's video row shows horizontal YouTube videos.
- **Vertical version:** afterwards, a 30–60 second vertical clip for YouTube Shorts, TikTok and Instagram. Office will cut it from the same footage, so you don't film twice.
- **Camera:**
  - Phone or camera on a tripod or an overhead arm. No handheld shaking.
  - Overhead (top-down) for the repair itself, plus one side angle.

- **Light:** bright, even light on the bench mat. No harsh shadows.
- **Sound:** clip-on microphone on the technician. Turn off music and the AC noise if you can.
- **Length:** 3–8 minutes for the main video. Keep only the real steps; cut waiting time.

Structure (every video)

1. **First 10 seconds:** show the fault, and say the problem in the words customers search, e.g. "This MacBook Air has horizontal lines on the screen."
2. **The device:** model and year, e.g. "MacBook Pro 14-inch, M3, 2023". Read it from the bottom case or About This Mac, not the customer's screen.
3. **What causes it:** in one or two plain sentences, from your bench experience. Dubai heat, sand, humidity and AC condensation are real causes; mention them only where they apply.
4. **The repair:** the actual steps, filmed close.
5. **The test at the end:** the device working.
6. **The end:** "We're MacBook Repair Dubai in Dubai Media City. Message us on WhatsApp if your Mac has the same problem." No address or phone number on screen; we add them in the description.

What to send to the office

- the raw video files
- **3 photos from the same job** (see Part 3)
- one line of notes: device model, fault, what fixed it, how long the repair took

Video topics (film in this order)

Priority 1 is the most important. Each topic matches what people already search on Google.

Priority 1: MacBook (our core)

#	Video title (working)	What to film	What people search
1	MacBook screen replacement on our Dubai bench	A cracked or dead MacBook screen: opening, removing the display, fitting the new one, testing	"macbook screen replacement", "macbook screen repair dubai"
2	Horizontal lines on a MacBook screen: what causes them and how we fix them	A MacBook with lines on screen; show the cable or display fault and the fix	"horizontal lines on macbook screen", "how to fix horizontal lines on macbook screen"
3	MacBook battery replacement: from "Service Recommended" to a new battery	Show the battery health message, the old battery, the swap and the new health reading	"macbook battery replacement", "macbook battery replacement dubai"
4	Swollen MacBook battery: why it happens and how we remove it safely	A swollen battery lifting the trackpad or case; safe removal	"macbook battery swollen"
5	Coffee or water spilled on a MacBook: what to do in the first 10 minutes, and what we do on the bench	Liquid damage: corrosion under the microscope, cleaning, the result	"macbook water damage repair"
6	MacBook logic board repair under the microscope	A board-level repair: finding the faulty part, soldering, testing	"macbook logic board repair", "macbook logic board repair microscope"

#	Video title (working)	What to film	What people search
7	MacBook not turning on: how we find the cause	Our diagnosis steps: charger, power reading, board check	"macbook not turning on"
8	Sticky MacBook keys and sand in the keyboard: clean or replace?	A keyboard with stuck keys; cleaning vs replacing	"how to clean macbook keyboard", "macbook keyboard replacement dubai"
9	MacBook overheating in the Dubai summer: fan and thermal service	A dusty fan and heatsink, cleaning, new thermal paste, temperature before and after	"macbook air m4 overheating", "macbook getting hot"
10	Getting data back from a dead MacBook	A data recovery job (show only folder names, never the customer's files)	"macbook data recovery dubai"
11	MacBook Pro "stage light" (Flexgate) effect and the fix	Backlight shadows at the bottom of the screen; the cable fix	"macbook flexgate", "macbook pro stage light"
12	MacBook not charging: USB-C or MagSafe port repair	A dead port: testing, repair, charging again	"macbook charging port repair"

Priority 2: iPad and iPhone (big search numbers)

#	Video title (working)	What to film	What people search
13	iPad battery replacement	Opening an iPad, battery swap, test	"ipad battery replacement"
14	iPad screen repair	Cracked iPad glass or display replacement	"ipad screen repair"
15	iPad water damage: can it be fixed?	A liquid-damaged iPad on the bench	"ipad water damage fix"
16	iPhone 16 screen flickering: what causes it	A flickering iPhone screen; diagnosis and fix	"iphone 16 screen flickering", "iphone 16 brightness flickering"
17	Why your iPhone gives you a small shock while charging	Explain with a real charger and cable on the bench: grounding, cheap chargers, when it's dangerous	"grounded iphone while charging", "iphone shock while charging"
18	iPhone screen replacement on the bench	Full screen swap and test	"iphone screen replacement"
19	iPhone battery replacement	Battery swap and health check	"iphone battery replacement"

Priority 3: Trust videos (one each)

#	Video	What to film
20	How to find us: the walk to our workshop	From the nearest parking or metro to Concord Tower, the lobby, the lift, the 10th floor, our door, reception. Film the real route a customer walks.
21	Meet the team	Abdul Aziz and the technicians at the bench, each saying their name and what they repair. Only people who agree to be filmed.

Pace: two videos a week. Topics 1–12 are done in 6 weeks.

Part 3: The photos

How to shoot (every photo)

- **Camera:** phone or camera at full quality. Horizontal, at least 1600 pixels wide (any modern phone is fine).
- **Light:** natural or bright even light. No flash glare on screens.
- **Real only:** no filters, no text on the photo, no logos added, no AI editing. Crop and brighten only.
- **Clean and tidy:** a clean bench mat, tools laid out, no clutter, no food or drinks.
- **No customer data on any screen** (same rule as videos).

Photos for each repair (3 per repair)

For **each** of these repairs, take 3 photos during a real job:

1. **The fault:** the device on our bench showing the problem (cracked screen, lines, swollen battery, corrosion, stuck keys).
2. **Mid-repair:** hands and tools at work, the device open, the part visible.
3. **The result:** the repaired device working, on the bench.

The repairs, one set each:

- **MacBook:**
  - screen
  - horizontal lines / display cable
  - battery
  - swollen battery
  - keyboard
  - trackpad
  - logic board (microscope shot)
  - water damage (corrosion close-up)
  - not turning on (meter or diagnosis)
  - overheating (dusty fan)
  - charging port
  - data recovery (drive or board, no customer files)
  - Flexgate
- **iMac:** screen or internals
- **iPad:** screen, battery, water damage
- **iPhone:** screen, battery, back glass, charging port, water damage

That's 25 repairs × 3 = **75 photos**. Spread them over the jobs you do anyway; don't stage fake repairs.

Workshop and team photos (once)

- Concord Tower from the street (daytime), with the building name visible
- the lobby and the building directory showing our office, if it's listed
- our office door and sign on the 10th floor
- reception / the customer area
- a wide shot of the bench area

- the microscope station
- parts storage (shelves, labelled boxes)
- each technician at the bench (only those who agree)
- Abdul Aziz at the bench

How to send photos

- Put them in the shared folder, one folder per repair (e.g. `macbook-screen`).
- Don't rename the files; the office names them for the website.
- Add one line per folder: device model and what the fault was.

Part 4: Every week

- [ ] 2 videos filmed and sent
- [ ] 3 photos from at least 3 real jobs
- [ ] Every finished customer asked for a Google review: QR code at the counter, plus the WhatsApp link within 24 hours. Ask them to mention which repair we did ("they replaced my MacBook screen").
- [ ] Office uploads the best 3 photos and any new video to our Google Business Profile.
